BOILER TUNE-UP STUDY

The U.S. EPA Small Business Office recently financed a boiler tune-up study that was conducted in California. The study concluded that regular boiler tune-ups improved operating efficiency, reduced fuel costs up to 5%, and lowered pollutant emissions. The states of Nevada, Arizona, and Hawaii, in partnership with California, are conducting an outreach program to inform small businesses and members of the public about the benefits of boiler tune-ups. Listed here are the contacts from the participating states who can provide more information on tune-up benefits.
